Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CORK potassium channel protein.

CORK; potassium channel; nematode; pore-forming domain; transmembrane helix; N-glycosylation site; potassium-agonist; potassium-antagonist; drug screening; nematocide; anthelminthic; cardiac disorder,

Caenorhabditis elegans.

                                                                                                                                                                                                                                                            This potassium channel sequence is encoded by the CORK gene from Caenorhabditis elegans, and has 2 pore-forming domains situated between hydrophobic transmembrane helix domains. The CORK sequence contains structural features resembling pore-forming H5 domains contain the GY/FC tripeptide motif required for potassium channels. 2 Putative pore-forming H5 domains selectivity. The protein contains 3 asparagine-linked glycosylation sites. The protein may be expressed in a heterologous host cell to assay substances to determine effects on cell growth. Potassium-agonists or potassium-antagonists identified by this method may be used as nematocides, anthelminthics or in therapy of cardiac

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes human and rat ENT1 receptors (ENTR1), with some amino-acids deleted, substituted or added, but which retain nucleoside transport activity, and can be used in drug development for agents in treating e.g. ischemula, cerebral embolism, rejection in organ transplant, malignant tumours, renitis, pancreatitis and hypertension. The EWTR1 proteins are nucleoside transporters which have vasotropic, immunosuppressant, thrombolylic, cytostatic, hypotensive, analgesic, antiinflammatory and anticoagulant activities. The transporter proteins, their DNA, oligonucleotides, transformants and antibodies can be used in drug development for agents in treating ischaemia, cerebral embolism, rejection in organ transplant, malignant tumours, renitis, pancreatitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel nucleoside transporter polypeptide, useful in drug development for agents in treating e.g. ischemia, cerebral embolism, rejection in organ transplant, malignant tumors, renitis, pancreatitis and hypertension
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ----PDGVETWYSKEFMGSLTIGSQLPNASINVFNLFLIIAGPLIYRVF 102

The present sequence represents a substantially purified equilibrative nucleoside transporter (RNT), human ENT1 (hENT1). ENTS can transport a variety of purines and pyrimidines, including adenosine, uridine, aguanosine, inosine, formycin B, tubercidin, and thymidine. ENTS are bidirectional, they transport a suitable permeant both into and out of cells. ENTS can be used as a tool for the development of new nucleoside drugs. Products from the present invention can be used for treating a subject having a disorder associated with an ENT. They can also be used with nucleoside drugs in the treatment of e.g. coronary or cerebrovascular anoxia, viral infection or cancer. The products (e.g. antibodies and oligonucleotides hybridising to nucleic acid sequences encoding ENTS) can also be used for detection and drug screening.

(nitrobenzylmercaptopurineriboside insensitive, equilibrative nucleoside transporter protein) from HeLa cells. The protein transports nucleosides across the plasma membrane by a facilitated diffusion process and is involved in the proliferative response. The transporter is useful in screening to identify natural nucleoside permeants and/or their linibitors or analogues, potential therapeutic agents, also for studies on protein structure and mechanism. Cells that express the iENTP as the only transporter protein are used for drug screening (especially to identify antitumour and antiviral nucleoside analogues), in chemotherapy
                                                                            invention relates to the isolation of a gene encoding a NBMPR-iENTP
                                                                                                                                                                                                                                                                             of cancer and for selective expression of heterologous genes for gene therapy. The cDNA is used for recombinant expression of iENTP and as a source of oligonucleotides (diagnostic primers and probes, ribozymes and antisense sequences). Antibodies raised against iENTP are used for detection of the protein by usual immunoasays and as (ant)agonists of iENTP activity. This sequence represents the human ENTI protein and is used for comparison with the human NBMPR-iENTP protein (AAB15517).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           75 IGSQLP--NASINVFNLFLIIAGPLIYRVFA------PVCFNIVN-----LTIILI 117

The present invention describes human and rat ENTI receptors (ENTRI), with some amino-acids deleted, substituted or added, but which retain nucleoside transport activity, and can be used in drug development for agents in treating e.g. ischaemia, cerebral embolism, rejection in organ transplant, malignant tumnours, ranitis, pancreatitis and hypertension. The ENTRI proteins are nucleoside transporters which have vasotropic, immunosuppressant, thrombolylic, cytostatic, hypotensive, analgesic, their DNA, oligonucleotides, transformants and antibodies can be used in drug development for agents in treating ischaemia, cerebral embolism, rejection in organ transplant, malignant tumours, renitis, pancreatitis and hypertension, and as analgesics, or blood platelet coagulation inhibitors, as well as agents to reduce side-effects during chemotherapy. The present sequence represents the human ENTRI protein.
cytostatic; hypotensive; antiinflammatory; analgesic; anticoagulant; nucleoside transporter; ischaemia; cerebral embolism; malignant tumour; organ transplant rejection; renitis; pancreatitis; hypertension; analgesic; blood platelet coagulation inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleoside transporter polypeptide, useful in drug development for agents in treating e.g. ischemia, cerebral embolism, rejection in organ transplant, malignant tumors, renitis, pancreatitis and

This represents an equilibrative nucleoside transport protein (iENTP),
which is insensitive to nitrobenzylmercaptopurine riboside (NBMPR). Cells
transformed with a construct containing the iENTP nucleic acid can be
used to produce the protein recombinantly iENTP is used to identify
specific ligands (particularly antiviral and antitumour nucleoside
analogues that are preferentially transported into cells) and to raise
antibodies. Cells in which iENTP provides all available transport
activity are used: (a) to identify permeants of iENTP and (b) to screen
specific inhibitors of iENTP (potential drugs). Fragments of the iENTP
cucleic acid are used, as probes, primers, antisense molecules, and
ribozymes for therapy or diagnosis, and knockout mice in which both
alleles encoding iENTP contain an inactivating defect are also useful for
alleles encoding iENTP contain an inactivating defect are also useful for
alleles used particularly, for cancer chemotherapy. Vectors in which
the iENTP gene is linked to a heterologous gene (e.g. encoding adenosine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11;
                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a substantially purified equilibrative nucleoside transporter (ENT), human ENT2 (hENT2). ENTS can transport a variety of purimes and pyrimidines, including adenosine, uridine, guanosine, formycin B, tubercidin, and thymidine. ENTS are bidirectional, they transport a suitable permeant both into and out of cells. ENTS can be used as a tool for the development of new nucleoside drugs. Products from the present invention can be used for treating a subject having a disorder associated with an ENT. They can also be used with nucleoside drugs in the treatment of e.g. coronary or erebrovascular anoxia, viral infection or cancer. The products (e.g. antibodies and oligonucleotides hybridising to nucleic acid sequences encoding ENTS) can also be used for detection and drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        63 TWYSKEFMGSLTIGSQLPNASINVFNLFLIIAGPLIYRVFAPVCFNIVNLTIILLLVIVL 122

equilibrative nucleoside transporter protein (NBMPR-iENTP) isolated from Heal cells. The protein transports nucleosides across the plasma membrane by a facilitated diffusion process and is involved in the proliferative response. The transporter is useful in screening to identify natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nucleoside permeants and/or their inhibitors or analogues, potential therapeutic agents, also for studies on protein structure and mechanism. Cells that express the iEMTP as the only transporter protein are used for drug screening (especially to identify antitumour and antiviral nucleoside analogues), in chemotherapy of cancer and for selective expression of heterologous genes for gene therapy. The cDNA is used (diagnostic primers and probes, ribozymes and antisense sequences). Antibodies raised against iEMTP are used for detection of the protein by usual immunoassays and as (ant)agonists of iENTP activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents nitrobenzylmercaptopurineriboside-insensitive,
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antiviral; antitumour; NBMDR-iENTP; nitrobenzylmercaptopurineriboside; insensitive, equilibrative nucleoside transporter protein; cancer; plasma membrane; facilitated diffusion; gene therapy; primer; probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               63 TWYSKEFMGSLTIGSQLPNASINVFNLFLIIAGPLIYRVFAPVCFNIVNLTIILLLVIVL 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18 PRDKYNIVYWLVILVGFGVLLPWNMFITIAPEYY------VNYWFKPDGVE 62

The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                     New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions

                                                                                                                                                                                       Secreted and transmembrane proteins and nucleic acids designated PRO, useful as hybridization probes, in chromosome and gene mapping and gene therapy -
                              Hillan KJ;
                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of anti-sense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The present sequence represents a substantially purified equilibrative nucleoside transporter (ENT), rat ENT2 (rENT2). ENTS can transport a variety of purines and pyrimidines, including adenosine, uridine, guanosine, formycin B, tubercidin, and thymidine. ENTS are bidirectional, they transport a suitable permeant both into and out of earls. ENTS can be used as a tool for the development of new nucleoside drugs. Products from the present invention can be used for treating a subject having a disorder associated with an ENT. They can also be used with nucleoside drugs in the treatment of e.g. coronary or cerebrovascular anoxia, viral infection or cancer. The products (e.g. antibodies and oligonucleotides hybridising to nucleic acid sequences encoding ENTS) can also be used for detection and drug screening.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              17;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a substantially purified equilibrative nucleoside transporter (ENT), rat ENT1 (rENT1). ENTS can transport a variety of purimes and pyrimidines, including adenosine, uridine, equanosine, formycin B, tubercidin, and thymidine. ENTS are bidirectional, they transport a suitable permeant both into and out of cells. ENTS can be used as a tool for the development of new nucleoside drugs. Products from the present invention can be used for treating a subject having a disorder associated with an ENT. They can also be used with nucleoside drugs in the treatment of e.g. coronary or cerebrovascular anoxia, viral infection or cancer. The products (e.g. antibodies and oligonucleotides hybridising to nucleic acid sequences encoding ENTS) can also be used for detection and drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ---IVNLTII 115
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         368
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         229

The present invention describes primer sets for synthesising 5602

full-length cDNAs defined in the specification. Where a primer set

comprises: (a) an Oilgo-dr primer and an Oilgonucleotide complementary

to the complementary strand of a polynuclectide which comprises one of

the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which complementary to the

complementary strand of a polynucleotide comprises a 5'-end

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide comprises a 5'-end

complementary strand of a polynucleotide comprises a 5'-end

complementary to the

Inhibitors or analogues, potential therapeutic agents, also for studies on protein structure and mechanism. Cells that express the iENTP as the only transporter protein are used for drug screening (especially to identify antitumour and antiviral nucleoside analogues), in chemotherapy of cancer and for selective expression of heterologous genes for gene therapy. The CDNA is used for recombinant expression of iENTP and as a source of oligonucleotides (diagnostic primers and probes, ribozymes and antisense sequences). Antibodies raised against iENTP are used for execution of the protein by usual immunoassays and as (ant)agonists of iENTP activity. This sequence represents the human HNP36 protein as used for comparison with the human NBMPR-iENTP protein (AAB15517).
involved in the proliferative response. The transporter is useful in
                              screening to identify natural nucleoside permeants and/or their
